BUREAU  
VERITAS

## EXPERTS IN WORKPLACE AIR, NOISE AND VIBRATION

From hazard identification to comprehensive exposure management, occupational hygiene plays a critical part in protecting workplace health and ensuring compliance. It is vital to recognise, evaluate and control airborne contaminants, noise and vibration - whether to safeguard employee wellbeing, support operational efficiency, or optimise conditions for safe and healthy working environments.

As occupational hygiene experts, Bureau Veritas has the experience, technical knowledge and regulatory understanding to support you with every requirement.

## WHY CHOOSE BUREAU VERITAS?

Our specialist UK occupational hygiene team of experienced consultants works with clients of all sizes across diverse industries, using proven methodologies to deliver trusted exposure assessments and control solutions. We're committed to understanding your workplace health challenges, working in partnership to identify risks across airborne contaminants, noise and vibration, and developing innovative, sustainable solutions.

The Bureau Veritas occupational hygiene team operates nationwide from strategic UK locations, with comprehensive monitoring equipment and technical expertise available for short and long-term assignments to meet every requirement. All our measurement and sampling procedures are calibrated and validated using techniques traceable to national and international standards (HSE, BSI, ISO, NIOSH).

All backed by the global expertise of the Bureau Veritas group, a world leader in testing, inspection and certification services with more than 400,000 clients worldwide - and a dedicated occupational hygiene leadership committed to building high-performing teams and delivering measurable business value.

BUREAU VERITAS RENOWNED AIR, NOISE AND VIBRATION

# EXPERTS EXPERTS EXPERTS

Working to reduce workplace exposures to air, noise and vibration with clients across finance, pharmaceutical, construction, manufacturing, and energy sectors.

COMPLIANCE - SOLUTION - PROTECTION

Working with clients to overcome worker health issues to chemical, noise and vibration hazards and evaluating the controls in place.

# OUR SERVICES

## OUR SERVICES

### WORKPLACE MONITORING

Some of our clients operate in energy sectors, where we provide comprehensive workplace air, noise, and vibration assessments aligned with CoSHH, CoNAWR, and CoVAWR legal requirements.

Through extensive site visits and close collaboration with site personnel and Health and Safety representatives, we develop detailed reports with actionable recommendations to achieve and maintain regulatory compliance in air, noise, and vibration management.

### LOCAL EXHAUST VENTILATION (LEV) TESTING

Bureau Veritas undertakes LEV testing to help clients comply with the CoSHH Regulations by determining the worker and control measure interaction and whether it works correctly.

Upon completion of the site survey and analysis, Bureau Veritas provides clients with a technical report including details of any suitable improvements measures required in order to improve the control of hazardous substances.

### COSHH RISK ASSESSMENTS

A COSHH risk assessment is a mandatory legal process under the Control of Substances Hazardous to Health Regulations 2002 to identify, evaluate, and control risks from hazardous substances in the workplace. It focuses on preventing or minimising employee exposure to chemicals, dusts, fumes, and biological agents.

Bureau Veritas can undertake these assessments, or train client staff to undertake them themselves while providing support and peer reviews.

### INDOOR WELLBEING ASSESSMENTS

Bureau Veritas delivers professional, comprehensive indoor wellbeing evaluations to CIBSE, BREEAM, WELL and other indoor workspace standards. These assessments identify airborne pollutants, moisture control issues, and ventilation deficiencies that could compromise occupant health and workplace productivity. Our expert assessments test for key contaminants - volatile organic compounds (VOCs), carbon dioxide, mold spores, particulates and dust using validated sampling methodologies traceable to HSE, BSI and NIOSH standards.

We combine technical rigor with practical recommendations, translating air quality findings into actionable control strategies that improve comfort, safety and operational efficiency. Whether addressing compliance concerns, investigating occupant health complaints, or optimizing HVAC performance, Bureau Veritas provides the expertise, equipment and regulatory knowledge to support your indoor air quality objectives.

# BUREAU VERITAS

## MEET OUR EXPERTS

Our experienced team of occupational hygiene experts in the UK is backed by our network of professionals working in acoustics, air quality, machine safety and vibration, whom we can draw upon to provide holistic solutions to our client's needs.

### AHMAR ZAMAN

#### PRINCIPAL CONSULTANT - OCCUPATIONAL HYGIENE

With 15 years of experience in occupational hygiene, including specialisation across airborne contaminants, noise and vibration monitoring, and LEV system testing, Ahmar is the Principal Consultant for Occupational Hygiene at Bureau Veritas. His experience includes comprehensive exposure assessments, biological monitoring, sampling strategy development, and strategic consultancy advice across manufacturing, defence, aerospace, pharmaceutical and chemical sectors.

Ahmar holds a B.Sc. Environmental Science, Post-Graduate Diploma in Occupational Hygiene (University of Manchester), and Licentiate Membership of the Faculty of Occupational Hygiene (LFOH). He has led teams across multiple organisations and his knowledge and understanding of occupational hygiene, underscores his market recognition leading to team excellence and innovative solutions.
